

The focusing solution

Roger Focus is an easy-to-use product that sends the speaker's voice directly into your ears.

This approach cuts out distracting noise, like nearby conversations or background noise from your environments, allowing you to hear and act upon more of the speaker's message.

What is Roger?

Roger is the new 2.4GHz digital standard that bridges the understanding gap, in noise and over distance, by wirelessly transmitting the speaker's voice directly to the listener.

Life is on

We are sensitive to the needs of everyone who depends on our knowledge, ideas and care. And by creatively challenging the limits of technology, we develop innovations that help people hear, understand and experience more of life's rich soundscapes.

Interact freely. Communicate with confidence.
Live without limit. Life is on.

Roger Focus for adults

Because everyone deserves the chance to focus

The focusing challenge

Adults with auditory processing disorder (APD) or unilateral hearing loss (UHL) find it tough to focus on what's being said. Since their brains struggle to perceive speech sounds, hearing and responding to the speaker's words can be a challenge. And as a result, they easily become distracted.

This focusing challenge is toughest when there is lots of background noise, like in busy social situations. Which is frustrating, because the ability to focus is crucial to effectively communicate.

There is a listening system that is proven to help adults with APD and UHL concentrate better on the speech they need to hear. It's not a form of therapy. It's complementary technology that helps adults focus on what's being said, wherever they happen to be.

Roger Focus receiver

How it works: The speaker wears a small Roger microphone, while you wear discreet Roger Focus behind-the-ear receivers. The microphone 'hears' and clarifies the speaker's words, before sending the instructions directly to the lightweight receivers and into your ears. As easy as that.

Roger microphones

Whatever your listening environment; there is a Roger microphone to suit.

Roger Pen

The Roger Pen is a discreet, cutting-edge microphone with fully automated settings that boosts both single and group conversations. It features Bluetooth for easy mobile phone calling and can also be used to hear audio from your TV and multimedia.

Roger Clip-On Mic

The Roger Clip-On Mic is a lightweight mini microphone for single conversations that clips easily onto clothing of the partner. It offers the same leading sound quality and multimedia connection as the Roger Pen.
