

# Phonak Fast Facts

## AutoSense OS

### What is it?

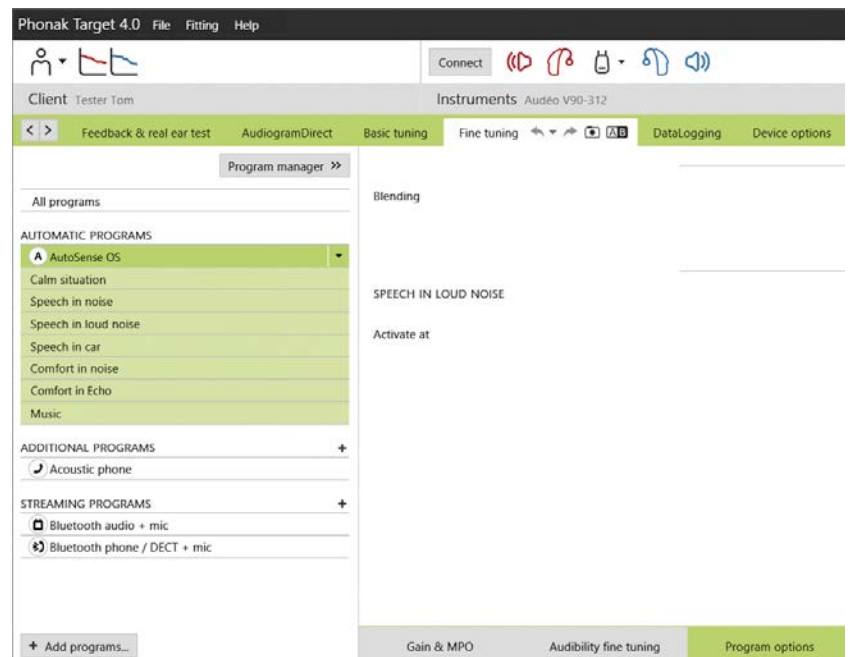

AutoSense OS is the automatic operating system, introduced with Phonak Venture, that provides improved sound recognition in listening situations by analyzing incoming sounds in realtime and automatically activating an appropriate blend of optimized gain settings, programs and features specific to that listening environment and everything inbetween. AutoSense OS identifies listening situations with accuracy and adapts with precision.

### Why use it?

The benefit for your client is the enhanced identification of different listening situations and seamless automatic blending provides a more natural and optimal hearing experience. This reduces manual program changes therefore improving ease of use.

### How do I use it?

AutoSense OS can be perfectly tailored to your individual client's needs in Phonak Target 4.0 by adjusting its overall settings or the individual program settings.
